```python
import random
user_choice=int(input("enter your choice:"))
print("Type 0 for rock ")
print("Type 1 for paper")
print("Type 3 for sissor")
computer_choice=random.randint(0,2)
print(computer_choice)
if int(user_choice<0) :
    print("Enter the proper number")
else:
    if int(user_choice)==int(computer_choice):
        print("You have a draw")
    elif int(user_choice)<int(computer_choice) :
        print("Paper wins against the rock")
    elif int(user_choice)>int(computer_choice):
        print("Rock wins against the scissor")
print("Hurray!! I am enjoying the game🥳")
```

Output

```
enter your choice:2
Type 0 for rock
Type 1 for paper
Type 3 for sissor
1
Rock wins against the scissor
Hurray!! I am enjoying the game🥳

=== Code Execution Successful ===
